Innovation of the UNCCD

Addendum to the SDG 15.3.1 Good Practice Guidance: Key Innovations relevant for the 2026 Reporting Process

Ingrid Teich

Senior Research Scientist
University of Bern, CDE / WOCAT

Lessons learnt from the 2022 reporting process

15 LIFE ON LAND

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

TARGET 15.1

CONSERVE AND RESTORE TERRESTRIAL AND FRESHWATER ECOSYSTEMS

By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements.

TARGET 15.2

END DEFORESTATION AND RESTORE DEGRADED FORESTS

By 2020, promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally.

TARGET 15.3

END DESERTIFICATION AND RESTORE DEGRADED LAND

By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world.

TARGET 15.4

ENSURE CONSERVATION OF MOUNTAIN ECOSYSTEMS

By 2030, ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their capacity to provide benefits that are essential for sustainable development.

TARGET 15.5

PROTECT BIODIVERSITY AND NATURAL HABITATS

Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and, by 2020, protect and prevent the extinction of threatened species.

TARGET 15.6

PROMOTE ACCESS TO GENETIC RESOURCES AND FAIR SHARING OF THE BENEFITS

Promote fair and equitable sharing of the benefits arising from the utilization of genetic resources and promote appropriate access to such resources, as internationally agreed.

TARGET 15.7

ELIMINATE POACHING AND TRAFFICKING OF PROTECTED SPECIES

Take urgent action to end poaching and trafficking of protected species of flora and fauna and address both demand and supply of illegal wildlife products.

TARGET 15.8

PREVENT INVASIVE ALIEN SPECIES ON LAND AND IN WATER ECOSYSTEMS

By 2020, introduce measures to prevent the introduction and significantly reduce the impact of invasive alien species on land and water ecosystems and control or eradicate the priority species.

TARGET 15.9

INTEGRATE ECOSYSTEM AND BIODIVERSITY IN GOVERNMENTAL PLANNING

By 2020, integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts.

TARGET 15.A

INCREASE FINANCIAL RESOURCES TO CONSERVE AND SUSTAINABLY USE ECOSYSTEM AND BIODIVERSITY

Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and ecosystems.

TARGET 15.B

FINANCE AND INCENTIVIZE SUSTAINABLE FOREST MANAGEMENT

Mobilize significant resources from all sources and at all levels to finance sustainable forest management and provide adequate incentives to developing countries to advance such management, including for conservation and reforestation.

TARGET 15.C

COMBAT GLOBAL POACHING AND TRAFFICKING

Enhance global support for efforts to combat poaching and trafficking of protected species, including by increasing the capacity of local communities to pursue sustainable livelihood opportunities.

SDG indicator 15.3.1

TARGET 15.3

END DESERTIFICATION AND RESTORE DEGRADED LAND

By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world.

To monitor progress towards achieving SDG Target 15.3, one indicator was adopted.

SDG indicator 15.3.1:
Proportion of land that is degraded over total land area

UNCCD is the CUSTODIAN AGENCY

The institution responsible for compiling and verifying country data and metadata of a particular SDG indicator; and for submitting the data, along with regional and global aggregates to the United Nations Statistics Division. It also provides Technical guidance to countries.

Decision 7/COP.13

The future strategic framework of the Convention

The Conference of the Parties,

Recalling decisions 3/COP.8, 12/COP.11, 7/COP.12, 8/COP.12 and 10/COP.12,

Recognizing that the adoption of a strategic framework contributes to a more focused, targeted, effective and efficient implementation of the UNCCD and to systematic monitoring and assessment of progress in the implementation of the Convention,

Acknowledging the outcomes of the United Nations Conference on Sustainable Development (Rio+20) related to desertification, land degradation and drought, as well as the Aichi Biodiversity Targets, Paris Agreement and Sendai Framework for Disaster Risk Reduction 2015–2030,

Reaffirming the 2030 Agenda for Sustainable Development and the Addis Ababa Action Agenda which is an integral part of it, and *recognizing* the important impact that United Nations Convention to Combat Desertification (UNCCD) implementation will have on the overall achievement of their objectives,

Welcoming the endorsement of the scientific conceptual framework for land degradation neutrality⁶ and the work done by the Global Mechanism, particularly to put this concept into action through the voluntary Land Degradation Neutrality Target Setting Programme,

Highlighting the importance of civil society in all matters relating to UNCCD implementation at local, national, subregional and regional levels and reconfirming the important role of civil society in the implementation of the Convention and the strategic framework (UNCCD 2018–2030 Strategic Framework) annexed to this decision,

Acknowledging that gender equality and the empowerment of women, girls and youth will make a crucial contribution to the implementation of the Convention and the UNCCD 2018–2030 Strategic Framework and to achieving the goals of the 2030 Agenda for Sustainable Development,

Noting the Voluntary Guidelines on the Responsible Governance of Tenure of Land, Fisheries and Forests in the Context of National Food Security⁷ and *recognizing* their potential contribution to the effective implementation of the UNCCD 2018–2030 Strategic Framework,

Recalling decision 15/COP.13 that requests the Committee on Science and Technology to assist in the work relating to the establishment and improvement of the monitoring framework for strategic objective 3 of the UNCCD 2018–2030 Strategic Framework,

Emphasizing the potential for synergies in efforts to address desertification/land degradation and drought and other major environmental challenges,

⁶ Decision 18/COP.13.

⁷ <www.fao.org/docrep/016/12801e/12801e.pdf>.

UNCCD 2018-2030 Strategic Framework

VISION + 5 SOs + IF

UNCCD uses national reporting as a tool to monitor progress toward the strategic objectives.

1. SO: Strategic objectives

- A. SO-1: To improve the condition of affected ecosystems, combat desertification/land degradation, promote sustainable land management and contribute to land degradation neutrality.
 - SO1-1 Trends in land cover
 - SO1-2 Trends in land productivity or functioning of the land
 - SO1-3 Trends in carbon stocks above and below ground
 - SO1-4 Proportion of degraded land over the total land area
 - SO1 Voluntary Targets
- B. SO-2: To improve the living conditions of affected populations.
 - SO2-1 Trends in population living below the relative poverty line and/or income inequality in affected areas
 - SO2-2 Trends in access to safe drinking water in affected areas
 - SO2-3 Trends in the proportion of population exposed to land degradation disaggregated by sex
 - SO2 Voluntary Targets
- C. SO-3: To mitigate, adapt to, and manage the effects of drought in order to enhance resilience of vulnerable populations and ecosystems.
 - SO3-1 Trends in the proportion of land under drought over the total land area
 - SO3-2 Trends in the proportion of the population exposed to drought
 - SO3-3 Trends in the degree of drought vulnerability
 - SO3 Voluntary Targets
- D. SO-4: To generate global environmental benefits through effective implementation of the United Nations Convention to Combat Desertification.
 - SO4-1 Trends in carbon stocks above and below ground
 - SO4-2 Trends in abundance and distribution of selected species
 - SO4-3 Proportion of important sites for terrestrial and freshwater biodiversity that are covered by protected areas, by ecosystem type
 - SO4 Voluntary Targets
- E. SO-5: To mobilize substantial and additional financial and non-financial resources to support the implementation of the Convention by building effective partnerships at global and national level
 - SO5-1 Bilateral and multilateral public resources
 - SO5-2 Domestic public resources
 - SO5-3 International and domestic private resources
 - SO5-4 Technology transfer
 - SO5-5 Future support for activities related to the implementation of the Convention

2. IF: Implementation Framework

- A. Financial and Non-Financial Sources
- B. Policy and Planning
- C. Action on the Ground

SDG 15.3.1 PROPORTION OF LAND THAT IS DEGRADED

TRENDS IN LAND COVER

“transformational” variable

SO1-1

TRENDS IN LAND PRODUCTIVITY

“fast” ecological variable

SO1-2

TRENDS IN CARBON STOCKS

“slow” ecological variable

SO1-3

“While it is difficult for a single indicator to fully capture the state or condition of the land, the sub-indicators are proxies to monitor the essential variables that reflect the capacity of the land to deliver ecosystem services” Sims et al. 2021

Addendum to the SDG 15.3.1 GPG

Section 1

INTEGRATING LAND CONDITION ASSESSMENTS OVER TIME

Focusses on the timeframe of the data used to assess land condition in each reporting period, on how to integrate the period assessment with the baseline, as well as providing additional guidelines on how to interpret and visualize changes over

Section 2

TRACKING PROGRESS TOWARDS LDN

This section responds to the need for guidance on incorporating the improved land component and the neutrality mechanism into target setting, LDN intervention planning, prioritizing areas for investment, and tracking progress towards LDN.

Section 3

ENHANCEMENT OF DATASETS AND METHODOLOGIES

Introduces new datasets related to land cover, land productivity, and soil organic carbon (SOC), and discusses various methods and experiences in comparing and selecting the most representative datasets for different contexts .

1.1 PERIOD assessment

After the baseline period (2000–2015), the first reporting period (Period 1) covers January 1, 2016, to December 31, 2019. Subsequent reporting processes follow every four years, with periods increasing their duration by four years: Period 2 spanning 2016–2023, Period 3 covering 2016–2027, and Period 4 assessing changes from 2016 to 2031. Each reporting period evaluates changes in land condition through the three sub-indicators.

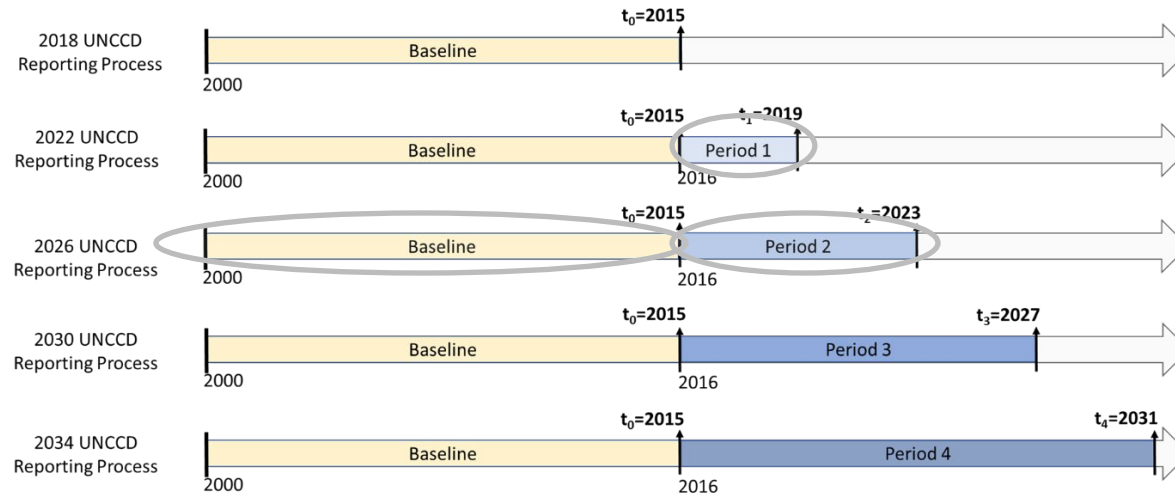

Figure 1: Timeline illustrating the four-year UNCCD reporting frequency for SDG 15.3.1.

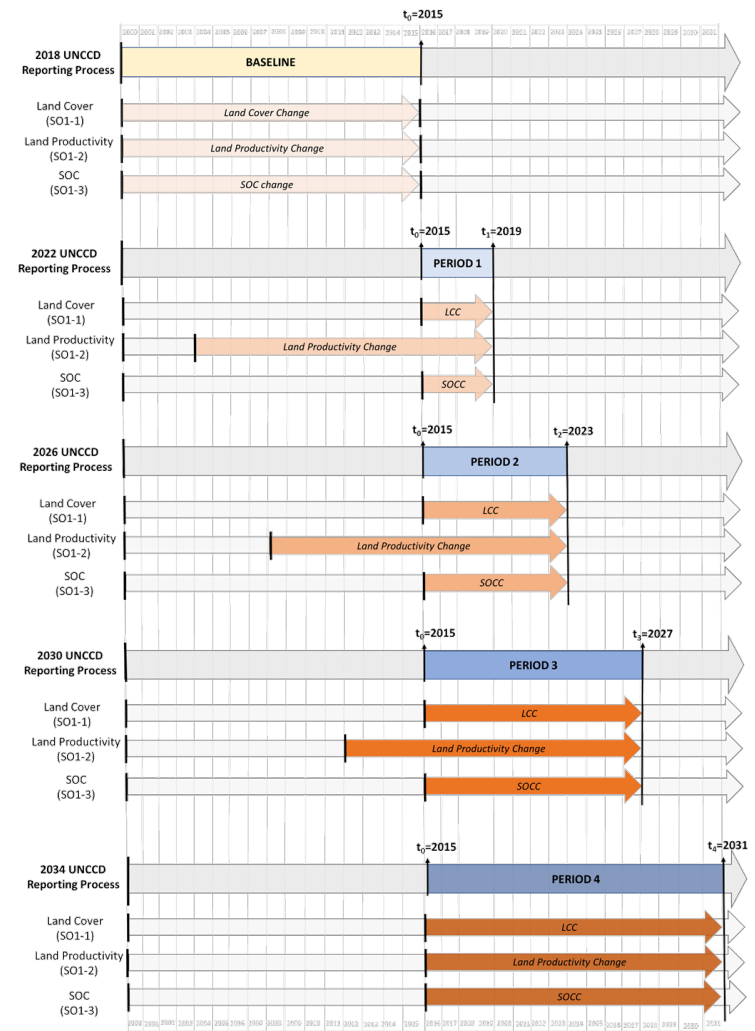

1.1 PERIOD assessment

Further clarification on the timeframes of the datasets used for Sub Indicator is included in the Addendum.

Period	Trends in Land cover	
	Initial Land Cover Year	Final Land Cover Year
Baseline: 2000-2015	2000	2015
Period 1: 2016-2019	2015	2019
Period 2: 2016-2023	2015	2023

Period	Trends in Land Productivity	
	Initial Year	Final Year
Baseline: 2000-2015	2000	2015
Period 1: 2016-2019	2004	2019
Period 2: 2016-2023	2008	2023
Period 3: 2016-2027	2012	2027

Period	Trends in Carbon Stocks	
	Initial Year	Final Year
Baseline: 2000-2015	2000	2015
Period 1: 2016-2019	2015	2019
Period 2: 2016-2023	2015	2023
Period 3: 2016-2027	2015	2027
Period 4: 2016-2031	2015	2031

2026 Reporting process: periods for SO1-1, SO1-2 and SO1-3

	Baseline period View raster		Reporting period View raster	
	Area (km ²)	Percent of total country area (%)	Area (km ²)	Percent of total country area (%)
Land area with improved land cover ⓘ	1335.24	1.77 %	143.27	0.19 %
Land area with stable land cover ⓘ	73091.67	97.11 %	74354.74	98.79 %
Land area with degraded land cover ⓘ	837.59	1.11 %	766.48	1.02 %
Land area with no land cover data ⓘ	0	0 %	0	0 %

2026 Reporting process: periods for SO1-4 (SDG 15.3.1)

It is necessary to estimate each indicator for the 3 periods!

	Total of degraded land (km ²)	Proportion of degraded land over the total land area (%) ⓘ
Baseline as of 2015 ⓘ	22036.29	29.9 %
Status as of 2019 ⓘ	34127.6	46.31 %
Status as of 2023 ⓘ	28887	39.2 %
	Area of change (km ²)	Percentage change ⓘ
Difference in degraded extent relative to Baseline ⓘ	6 850.71	31.09 %

1.1 PERIOD assessment

For each reporting period a final map that shows the results of the period assessment is obtained. The **“Period Assessment”** is the result of the evaluation of land condition for a specific reporting period, based on the combination of the three sub-indicators (Trends in Land Cover, Trends in Land Productivity, and Trends in Carbon Stocks) by applying the one-out, all-out principle. **The period assessment does not capture the degradation or improvement that occurred during the baseline period and therefore it cannot be used to estimate SDG indicator 15.3.1 on its own.**

1.2 STATUS

- **Status** refers to the final condition of land at the end of each reporting period, classified as either degraded, stable, or improved.
- The Status is determined by **combining the results of the current period assessment with the baseline assessment** .
- This comparison is essential to account for areas identified as degraded in the baseline that have since remained unchanged in land condition. For example, if an area was classified as degraded during the baseline period but was stable afterwards, it will be assessed as stable during the period assessment. However, the land's condition is still degraded as there has been no improvement since the baseline
- **The resulting status map enables the estimation of SDG Indicator 15.3.1** by providing a spatially explicit view of areas that are either stable, improved, or degraded, considering also their initial condition

1.2 STATUS MATRIX

The “Status Matrix” allows a systematic **comparison** of the **period assessment** with the **baseline** to determine the status of land condition at pixel level.

		PERIOD ASSESSMENT		
		DEGRADED	STABLE*	IMPROVED*
BASELINE	DEGRADED	Degraded	Degraded	Improved
	STABLE*	Degraded	Stable	Improved
	IMPROVED*	Degraded	Improved	Improved

* Not Degraded areas.

The “Status Matrix” is a 3_x_3 matrix to assess Status by comparing the reporting period assessment (columns) and the baseline (rows).

The resulting map, called the Status Map, integrates the assessment of changes that occurred during the reporting period with the previous status of land condition (baseline). This approach ensures that the map reflects both past and recent changes, offering a more accurate overall assessment of land degradation and improvement over time.

1.2 STATUS

LDN

SDG 15.3.1:
Proportion of degraded land

SDG target 15.3

TARGET 15.3

END DESERTIFICATION AND RESTORE DEGRADED LAND

By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world.

Addendum to the SDG 15.3.1 GPG

Section 1

INTEGRATING LAND CONDITION ASSESSMENTS OVER TIME

Focusses on the timeframe of the data used to assess land condition in each reporting period, on how to integrate the period assessment with the baseline, as well as providing additional guidelines on how to interpret and visualize changes over

Section 2

TRACKING PROGRESS TOWARDS LDN

This section responds to the need for guidance on incorporating the improved land component and the neutrality mechanism into target setting, LDN intervention planning, prioritizing areas for investment, and tracking progress towards LDN.

Section 3

ENHANCEMENT OF DATASETS AND METHODOLOGIES

Introduces new datasets related to land cover, land productivity, and soil organic carbon (SOC), and discusses various methods and experiences in comparing and selecting the most representative datasets for different contexts .

2.1 FURTHER CHARACTERIZATION

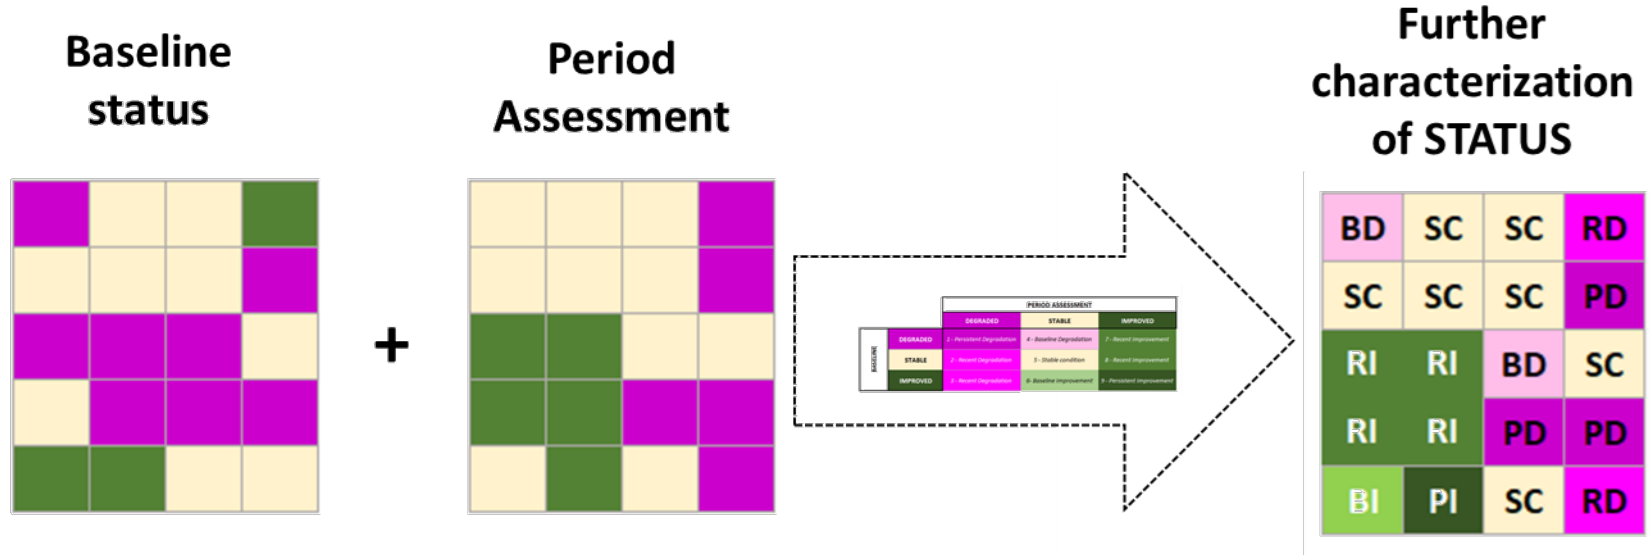

Even though the status maps categorize land condition into three broad categories (Degraded, Stable, and Improved), the underlying dynamics that lead to this final status can be more complex. Specifically, there are nine different types of changes from the baseline relative to any subsequent time period that can result in the final status, as illustrated in the 3 x 3 matrix of changes

		PERIOD ASSESSMENT		
		DEGRADED	STABLE	IMPROVED
BASELINE	DEGRADED	1 - Persistent Degradation	4 - Baseline Degradation	7 - Recent Improvement
	STABLE	2 - Recent Degradation	5 - Stable condition	8 - Recent Improvement
	IMPROVED	3 - Recent Degradation	6 - Baseline Improvement	9 - Persistent Improvement

Expanded version of the "Status Matrix" showing land condition that results from the comparison of the baseline (rows) and the period assessment (columns)

2.1 Further Characterization

Example of further characterization of land degradation and land improvement, which allows detection of areas with persistent degradation (PD), recent degradation (RD) and baseline degradation (BD) and areas with persistent improvement (PI), recent improvement (RI) and baseline improvement (BI)

2.2 Counterbalancing

Category	Reported in SDG Indicator 15.3.1 as	Used in LDN counterbalancing mechanism
PD	Degraded	✓ (LOSS)
RD	Degraded	✓ (LOSS)
BD	Degraded	✗
PI	Not-degraded	✓ (GAIN)
RI	Not-degraded	✓ (GAIN)
BI	Not-degraded	✗
PS	Not-degraded	✗

Categories of land condition according to the expanded status characterization and their usage for estimation of SDG indicator 15.3.1 and for counterbalancing

2.2 Counterbalancing

Improvement

1
AVOID

2
REDUCE

3
REVERSE

Avoid: Land degradation can be avoided by addressing drivers of degradation and through proactive measures to prevent adverse change in land quality of non-degraded land and confer resilience, via appropriate regulation, planning and management practices.

Reduce: Land degradation can be reduced or mitigated on agricultural and forest land through application of sustainable management practices (sustainable land management, sustainable forest management).

Reverse: Where feasible, some (but rarely all) of the productive potential and ecological services of degraded land can be restored or rehabilitated through actively assisting the recovery of ecosystem functions.

and degradation is one of the most severe environmental challenges globally. To address its adverse impacts, the United Nations endorsed the Land Degradation Neutrality (SDG 15.3) within the Sustainable Development Goals in 2015. Trends in land productivity is a key sub-indicator for reporting progress toward SDG 15.3. Currently, the highest spatial resolution of global land productivity dynamics (LPD) products is 250-meter, which seriously hamper the SDG 15.3 reporting and intervention at the fine scale. Generating higher spatial resolution product faces significant challenges, including massive data processing, image cloud pollution, incompatible spatiotemporal resolution. This study, leveraging Google Earth Engine platform and utilizing Landsat-8 and MODIS imagery, employed the gap-filling and Savitzky-Golay filtering algorithm and advanced spatiotemporal filtering method to obtain a high-quality 30-meter NDVI dataset, then the global 30-meter LPD product from 2013 to 2022 was generated by using the FAO-WOCAT methodology and compared against multiple datasets. This is the first global scale 30-meter LPD dataset, which provides essential data support for SDG 15.3 monitoring and reporting globally.

Background & Summary
Sustainable Development Goal (SDG) target 15.3, adopted by the United Nations General Assembly in 2015, aims to combat desertification, restore degraded land and soil, and strive to achieve a land degradation neutral world by 2030. The official indicator of this target is the SDG 15.3.1 "Proportion of land that is degraded over total land area", which is under the custodianship of the United Nations Convention to Combat Desertification (UNCCD). SDG 15.3.1 has three key sub-indicators, trends in (i) land productivity, (ii) land cover, and (iii) carbon stocks above and below ground¹⁹. Among them, land productivity representing the source of all food, fibre and fuel that sustains humans²⁰, is a key indicator of ecosystem health, reflecting the impacts of land management, climate change, and sustainable development. This indicator has become a focal point in SDG 15.3 monitoring, since it provides continuous and synoptic information on the status and trends of vegetation growth, which is linked to the biological capacity of the land²¹. Earth observation (EO) has become the primary tool for assessing large-scale land productivity and its dynamics²². While land productivity dynamics (LPD) can be measured in various ways, the Normalized Difference Vegetation Index (NDVI) is widely used across different scales and regions for LPD monitoring due to its

Workflows for verification

By using maps delineating areas of known land degradation and improvement, allied with expert knowledge, workshop participants were able to select the LPD map that best represented the known situation on the ground. The map on the left shows known areas of forest fires and mining, both of which represent areas of land degradation. The maps in the centre and right are two LPD maps from the map set. The centre map aligns best with the situation shown in the ground data (left map).

CRIC23 - Panama

SDG Indicator 15.3.1 measures the proportion of land that is degraded over total land area.

The UNCCD defines land degradation as “the reduction or loss of the biological or economic productivity and complexity of rain fed cropland, irrigated cropland, or range, pasture, forest and woodlands resulting from a combination of pressures, including land use and management practices” (UNCCD 1994, Article 1).

Achieve No Net Loss

Under this definition, the extent of land degradation for reporting on SDG Indicator 15.3.1 is calculated as a binary - degraded/not degraded - quantification using its three sub-indicators which are:

LAND COVER CHANGE

TRENDS IN LAND PRODUCTIVITY

CARBON STOCKS

Global Land
Operations

Land Productivity Dynamics

Global Land
Operations

The Land Productivity Dynamics data set (LPD) integrate a 15 years baseline observation period from 2000 to 2015, a first reporting period from 2004 to 2019, and a second reporting period from 2008 to 2023.

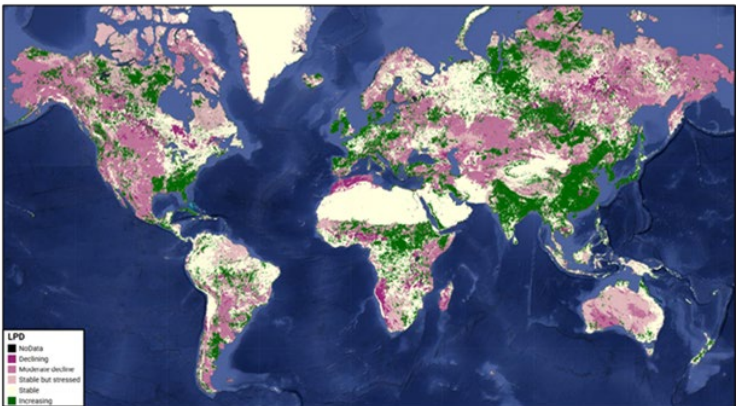

The maps provide information on the direction, intensity and persistence of the trend and change of above-ground biomass – surface biomass - generated by photosynthetically active vegetation cover, widely equivalent to Gross Primary Production (GPP) of the global land surface.

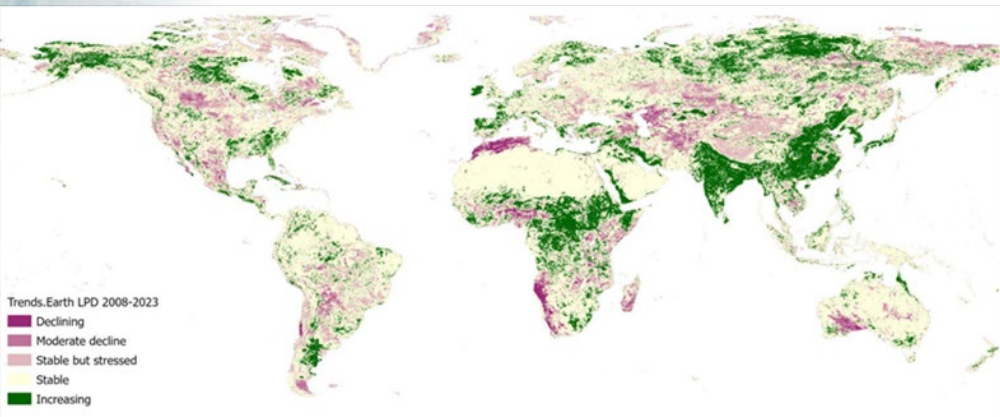

JRC LPD 2008-2023

FAO WOCAT LPD 2008-2023

Trends.Earth LPD 2008-2023

Key achievements:

- **Harmonized nomenclature** across all three data producers for consistent classification
- **Standardized class definitions and color schemes** enabling direct visual comparison between datasets
- **Comprehensive product documentation** currently under development to support informed data selection for national reporting

These efforts ensure comparability and reproducibility, facilitating evidence-based decision-making for SDG 15.3.1 monitoring.

Key Differences Between the Three Products

Input Data & Spatial Resolution:

- **JRC:** Multi-sensor time series (SPOT-VGT, PROBA-V, Sentinel-3 OLCI) spanning 1998-2024 at **1km resolution**, transitioning to harmonized 300m NDVI for v2
- **Trends.Earth:** MODIS Terra MOD13Q1 V6.1 at **250m resolution**
- **FAO WOCAT:** MODIS Terra MOD13Q1 V6.1 at **250m resolution**

Annual Statistic:

- **JRC:** Cumulative annual NDVI (SumNDVI) - captures total annual productivity
- **Trends.Earth:** Annual mean NDVI - represents average conditions
- **FAO WOCAT:** Annual mean NDVI with quality pixel replacement

Methodological Approach:

- **JRC:** Ecosystem-based clustering (EFTs) with Local Net Scaling for context-aware productivity assessment
- **Trends.Earth:** Three-component system (Trend, State, Performance) with optional climate corrections (RUE, RESTREND, WUE)
- **FAO WOCAT:** Flexible parametrization with three sensitivity modes (Broad Detection, Priority Area, Balanced) using Mann-Kendall trend analysis

from Conservation International

SDG Indicator 15.3.1 (UNCCD Strategic Objectives 1 and 2)

The below datasets can be used to support assessing SDG Indicator 15.3.1, and include indicators of change in land productivity dynamics (LPD), land cover, and soil organic carbon. These datasets can be used to support reporting on UNCCD Strategic Objectives 1 and 2. Note that there are three different LPD datasets available (from the default Trends.Earth method, from FAO-WOCAT, and from JRC).

Country	SDG 15.3.1 using Trends.Earth LPD	SDG 15.3.1 using FAO-WOCAT LPD	SDG 15.3.1 using JRC LPD
ABW	ABW (Trends.Earth LPD)	ABW (FAO-WOCAT LPD)	ABW (JRC LPD)
AFG	AFG (Trends.Earth LPD)	AFG (FAO-WOCAT LPD)	AFG (JRC LPD)
AGO	AGO (Trends.Earth LPD)	AGO (FAO-WOCAT LPD)	AGO (JRC LPD)
AIA	AIA (Trends.Earth LPD)	AIA (FAO-WOCAT LPD)	AIA (JRC LPD)
ALB	ALB (Trends.Earth LPD)	ALB (FAO-WOCAT LPD)	ALB (JRC LPD)
AND	AND (Trends.Earth LPD)	AND (FAO-WOCAT LPD)	AND (JRC LPD)
ARE	ARE (Trends.Earth LPD)	ARE (FAO-WOCAT LPD)	ARE (JRC LPD)
ARG	ARG (Trends.Earth LPD)	ARG (FAO-WOCAT LPD)	ARG (JRC LPD)
ARM	ARM (Trends.Earth LPD)	ARM (FAO-WOCAT LPD)	ARM (JRC LPD)
ASM	ASM (Trends.Earth LPD)	ASM (FAO-WOCAT LPD)	ASM (JRC LPD)
ATG	ATG (Trends.Earth LPD)	ATG (FAO-WOCAT LPD)	ATG (JRC LPD)
AUS	AUS (Trends.Earth LPD)	AUS (FAO-WOCAT LPD)	AUS (JRC LPD)

Land Cover - Requirements

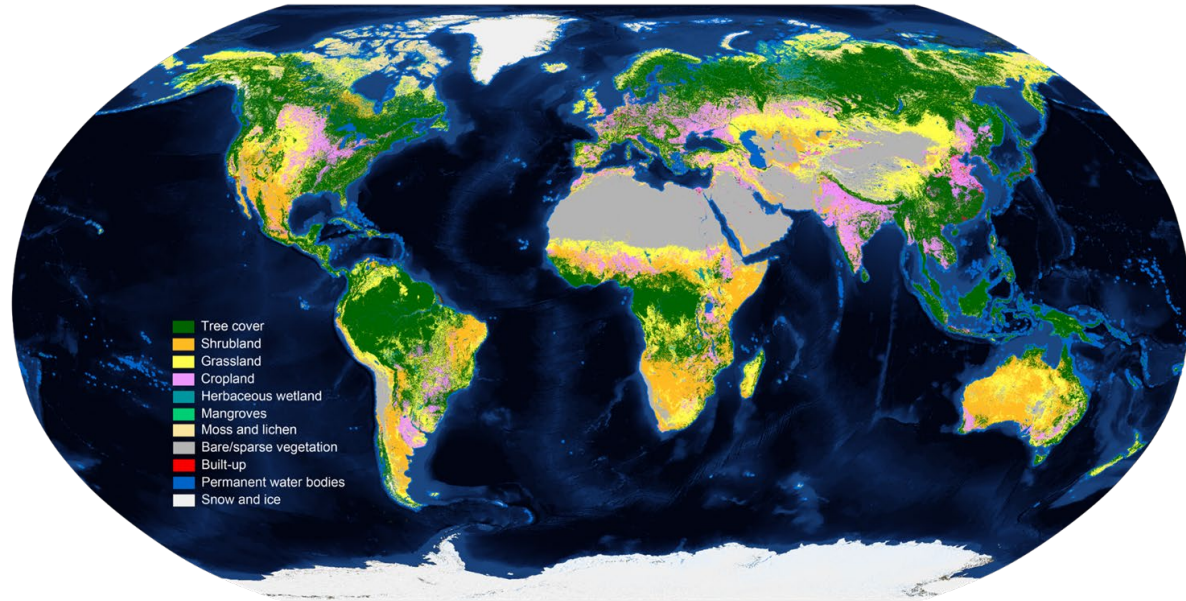

CEOS Satellite Data for SDG Indicator 15.3.1

SDG Requirement	How ?		When ?	Where ?	Comments	CEOS Mission Classes
	Spatial Resolution	Measurement Type	Observation Frequency	Sampling Type		
SDG 15.3.1 Land Cover Change	10-100m (The agreed minimum standard for national data is 100m aiming at 30m)	Classification/ Change Detection	Annual	Global, National	<p>[ESA-CCI-LC (300m) or SEEA-MODIS as global default. Another Copernicus Dynamic Land Cover (100m) also available.] In the last reporting cycle (2018), the global default data were ESA-CCI-LC at 300m resolution. (cf. Mattina et al. 2018)</p> <p>The agreed minimum standard for national land cover change data is 100m aiming at 30m. Data users expressed the need to have 10-30m resolution to generate reliable information for planning and decision-making processes to implement SDG 15.3. Many countries are already using national data at 30m resolution for LCC reporting. For small island developing states (SIDS), 300m and even 100m resolution is not sufficient - many SIDS depend on the global default data for reporting and would need a higher resolution. The standard for the classification scheme is that it is a user-decision but following specific rules, e.g. use hierarchical class structures, aggregate to the GPG listed reporting scheme, and attain internal consistency across dates. (cf. GEO-LDN Initiative 2020)</p>	1,2

Global Land
Operations

Global Land Cover 2020, 10 m resolution (LCM-10)

LCFM - a dynamic global land cover service at 10m

LCFM Product Suite

- **Annual land cover maps at 10 m** resolution for 2020-2026
 - Consistent change mapping between years
- **Innovative products**
 - 10 m Pan-tropical Tree Cover Density & Tree Cover Presence Change
 - 10 m sub-annual land cover products, monthly/NRT Land Surface Categories
- **Open-access datasets, training data & workflows**
- **A dynamic land cover service supporting:** i) Enhanced global environmental monitoring ii) Tailored regional or thematic mapping iii) Valuable input for downstream applications

Innovations for UNCCD 2026 Reporting: Building National Capacity

Sara Minelli,
Programme Officer
UNCCD secretariat

United Nations
Convention to Combat
Desertification

Innovation for UNCCD Reporting Capacity Building

Integrated Support from Regional Centres: Leveraging regional institutions to provide localized technical assistance, context-specific training, and ongoing technical support

Strengthened Knowledge Exchange: Facilitating cross-country learning through regional workshops and peer-to-peer exchanges

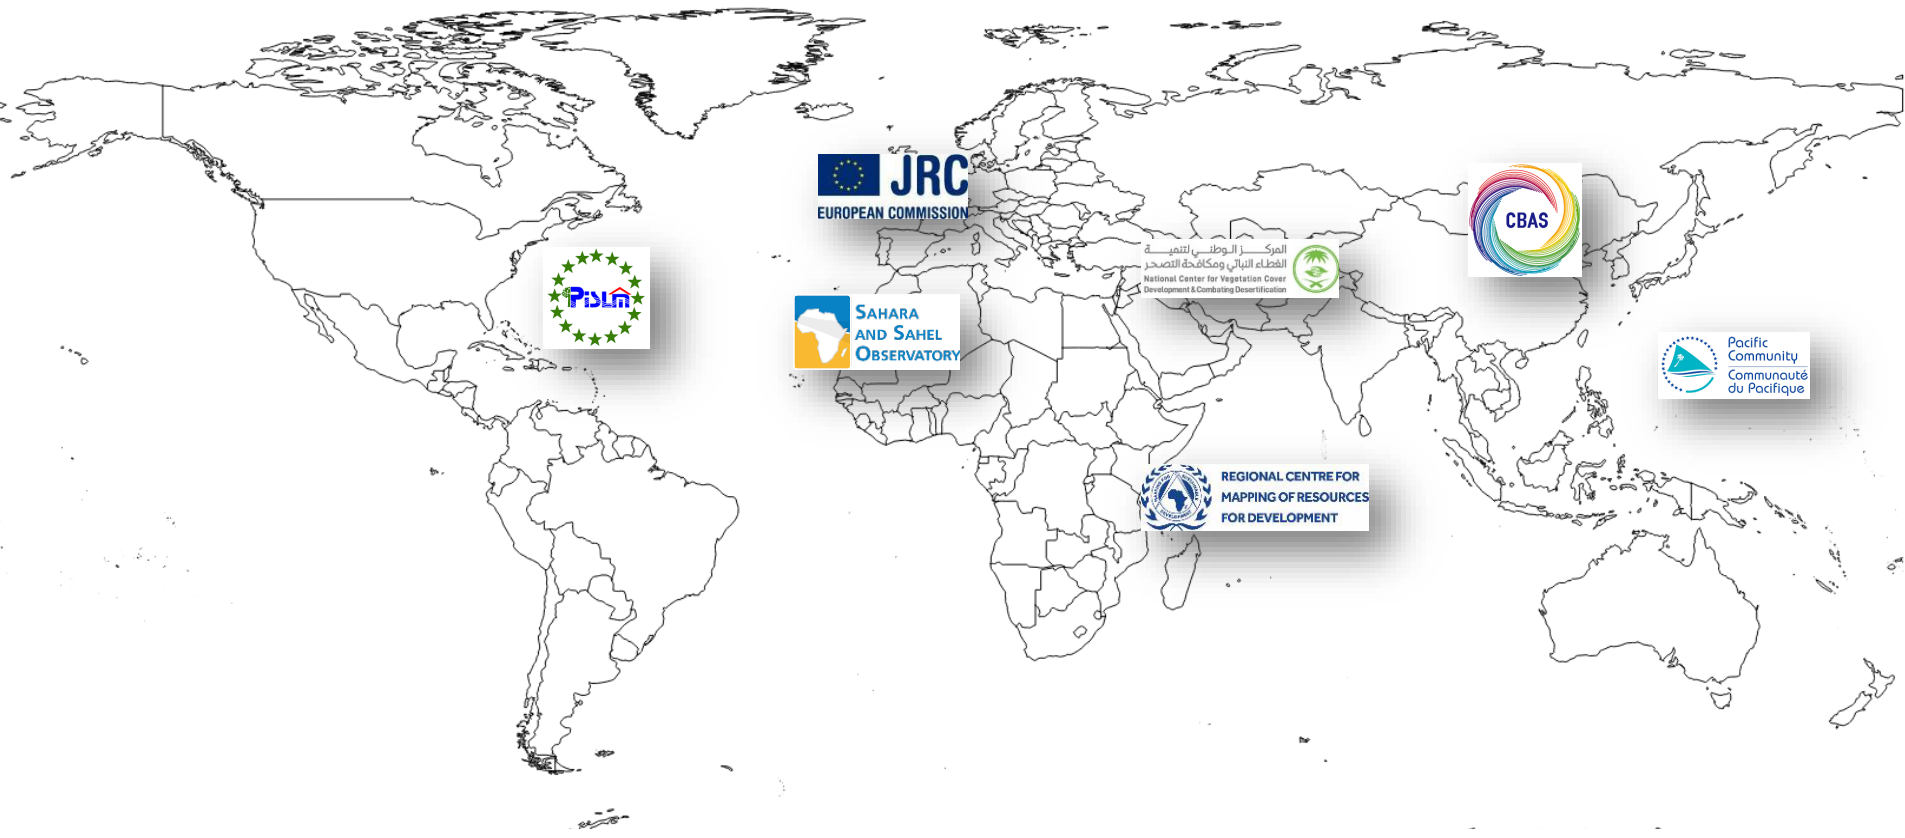

Enhanced Sustainability Through Distributed Expertise: Establishing long-term, regionally based hubs that reduce reliance on external consultancies and ensure continuity between reporting cycles

Mandate

Decision 2/COP.16 requested the UNCCD secretariat, subject to the availability of financial resources, together with data providers, financial and technical partners and the Earth Observation community, including the Group on Earth Observations Land Degradation Neutrality Flagship initiative, to enhance collaboration with regional institutions, initiatives and organizations to provide data and technical support to Parties, especially developing countries, small island developing States and least developed countries during the UNCCD 2026 reporting process

Convention to Combat
Desertification

Training of Trainers

27-28 November 2025, Panama City

Focus: Choices country
Parties need to make when
preparing their national
reports

What other datasets are
available?

What other land cover classes
would be important to monitor?

Which stakeholders should
participate in this discussion?

What soil-property data is
available for the country?

What verification data can be
used?

Is field validation possible?

Regional Centres – Main responsibilities

Capacity building

Act as trainers in regional capacity building workshops and online seminars

Technical support

Assist countries with data access, interpretation, recalculation, and tool usage for consistent reporting

Helpdesk

Respond to questions from countries

Quality assurance

Review national reports for accuracy, consistency, and completeness

Timeline for reporting

Aug 2025

Launch of the
2026 reporting
process

27-28 Nov 2025

Training of
Trainers

Feb - May 2026

In-person
regional
capacity
development
workshops

Jan 2026 – Feb 2027

Ongoing
technical
support to
countries

**Before reporting
deadlines**

Quality
assurance of
national reports

Tentative deadlines for submission of national reports:

- **November 2026:** For SO1, including SDG Indicator 15.3.1
- **February 2027:** For all the other SOs

Network of experts on LD monitoring in Africa

Launched on **March 1st, 2023** in **Nairobi** (First GMES & Africa Integrated Management Meeting).

Subscription is open:

<http://projet.oss-online.org/GMES-Africa/jin/en/index.html>

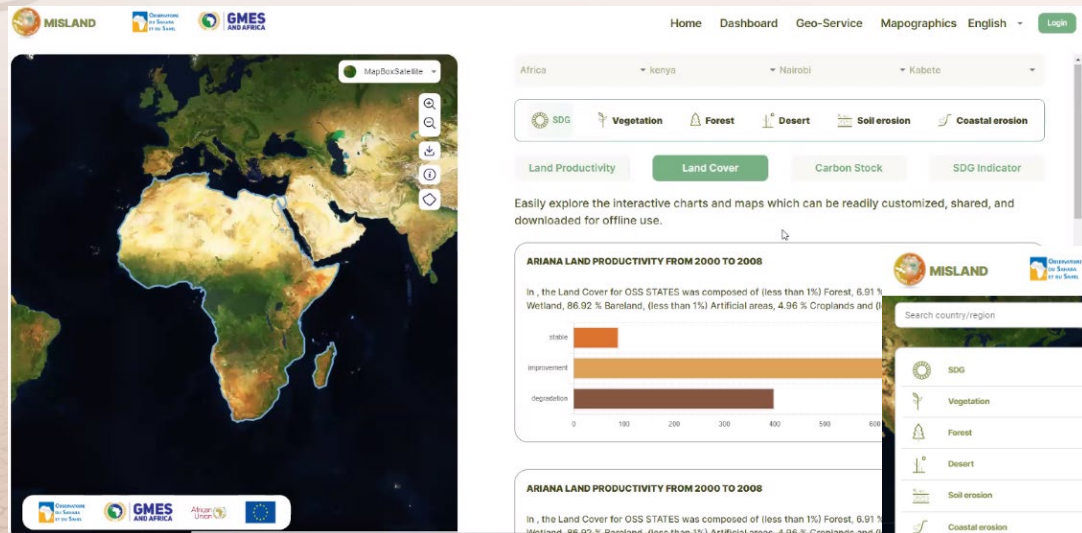

- **Initial composition:** **Committee of Champion-Leaders** (management, scientific community, regional economic comm., islands + Indian Ocean...) + **Awareness Committee** + Experts, researchers, etc.
- **Accompany & support the continental LD service development.**

The screenshot shows the 'Adhésion' (Subscription) form. On the left sidebar, the 'ADHESION' link is circled in red and marked with a pink star with the number 1. The form itself is titled 'Adhésion' and has a pink star with the number 2 in the top right corner. It contains several input fields: 'Nom', 'Prénom', 'Qualification (diplôme)', 'Email', 'Fonction', 'Organisme', 'Pays, ville', and 'Téléphone / WhatsApp'. There are radio buttons for 'Homme' and 'Femme'. At the bottom, there is a checkbox labeled 'J'accepte la charte du niveau d'experts' (marked with a pink star with the number 3) and a 'SOUMETTRE' button (marked with a pink star with the number 4). Social media icons for Twitter, Facebook, and LinkedIn are in the top right corner.

Restoration of degraded Lands in Africa : a Book !

DOCUMENTARY BOOK ON RESTORED DEGRADED LANDS IN AFRICA

- Provide decision-makers and general public with useful, relevant and up-to-date infos ;
- Facilitate decision-making process for protection and restoration.

Questionnaire sur la dégradation des terres en Afrique

La dégradation des terres en Afrique a des répercussions dramatiques sur le développement durable du continent. Selon l'Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO), près de 65% des terres productives en Afrique sont dégradées, ceci impacte négativement la productivité agricole, la résilience des écosystèmes et la sécurité alimentaire des populations.

Dans le cadre de l'élaboration d'un livre documentaire sur la restauration des terres dégradées en Afrique, l'Observatoire du Sahara et du Sahel (OSS) sollicite votre expertise pour répondre à un questionnaire sur la dégradation des terres en Afrique, ainsi que sur les actions et les politiques qui pourraient être mises en œuvre pour les restaurer. Votre participation à ce questionnaire sera précieuse et permettra de mieux comprendre les enjeux et les besoins en matière de gestion durable des terres.

Les contributeurs seront mentionnés dans les produits qui en découleront.

Si vous avez besoin d'aide et de précisions pour y répondre, n'hésitez pas à nous contacter via :

plateforme@oss.org.tn

L'OSS compte sur votre engagement et vous remercie pour votre active participation.

Success stories : Seychelles

For a consistent continental LD monitoring service for Africa :
Need to include its **islands**

- ❑ Adoption of cross-fertilization approach to support the Seychelles in establishing a permanent mechanism for monitoring and reporting on Land Degradation Neutrality (LDN) ;
- ❑ Providing technical assistance to national experts in order to monitor SDG 15.3.1 indicator.

Seychelles : Visits to hotspots identified by stakeholders

Invasive species

Forest destroyed by the fire

Erosion

The artificial Island

- **Invasive species** : This is considered as one of the major issues of land degradation in Seychelles and among the false positives , where forest areas and natural parks appear greener in satellite images over time, but this is largely due to invasive species that add pressure on native vegetation.
- **Artificial islands** : the transformation from bare earth to urbanized areas and industrial zones, as well the development of artificial islands is a real concern for the Seychelles
- **Forest fires** : the fires occurred in the last decades damaged severely the forest ecosystem
- **Gulf spaces** : misclassified as grasslands
- **Reconversion of agricultural lands into touristic zones**

Field visit in Tunisia :Main factors of land degradation

Creative Commons

Open Data and Sharing Approaches for Reporting with Creative Commons

CRIC23 Side Event - 1 December 2025

Taylor Campbell and Monica Granados, Creative Commons

WHAT IS CREATIVE COMMONS?

Creative Commons (CC) is an international nonprofit organization that empowers people to grow and sustain the commons of shared knowledge and culture with Creative Commons licenses. We aim to [address the world's challenges](#), and our [Open Science](#) work promotes open access to research and data to equitably solve the climate crisis and preserve global biodiversity and ecology.

Image: Fly Freely by Katy Huertas is licensed CC BY-NC-SA 4.0; here cropped from the full work.

CREATIVE COMMONS <> UNCCD

Advising the UNCCD Secretariat on applying data licensing guidance to the UNCCD's policies, platforms, and practices.

These steps help the UNCCD's valuable data resources be shared, accessible, reusable, and interoperable around the world, especially in support of Land Degradation Neutrality and the achievement of Sustainable Development Goal Target 15.3.

Specifically, when it comes to open data and sharing approaches for reporting, Country Parties are prompted to indicate the open licenses.

LICENSE SELECTION

When it comes to open data and sharing approaches for UNCCD reporting, Country Parties are prompted to indicate the open licenses that apply to their national data.

User Specific Licence (USL)

UNCCD will use the data provided by country Parties in the reporting process using the licence Creative Commons Attribution-NonCommercial 4.0 International (CC BY-NC 4.0). To find out more about this licence (translated in all UN languages), please visit this [link](#).

However, in order to support legal, confident, and consistent reuse of national data for tracking land degradation and drought, and to enable seamless sharing with UNCCD partners, UNCCD strongly recommends country Parties to share data under the most open terms, i.e. through a public domain dedication using the Creative Commons Zero (CC0) or by Creative Commons Attribution (CC BY).

Click [here](#) to learn more about the Creative Commons licences.

Choose a licence:

A screenshot of a web form showing a dropdown menu for license selection. The dropdown is open, displaying a list of options. The first section is 'Most Open (Recommended)' with two options: 'Creative Commons Universal Public Domain Dedication 1.0 (CC0)' and 'Attribution 4.0 International (CC BY 4.0)'. The second section is 'More Restrictive' with three options: 'Attribution-ShareAlike 4.0 International (CC BY-SA 4.0)', 'Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)', and 'Custom licence (please state the licence terms and additional restrictions here)'. The dropdown menu has a blue header bar and a white body with a blue border.

THE CALL FOR OPEN

Open licensing is critical for data and sharing approaches to reporting. These approaches strengthen synergies with other Rio Conventions by promoting open knowledge exchange across climate, biodiversity, and land agendas.

Our data licensing guidance offers a practical pathway for reporting according to existing COP decisions for enhancing data accessibility. Specifically:

- **Decision 16/COP.11** requests that data and information from the reporting process are available and accessible to all, especially at the national and local levels.
- **Decision 17/COP.11** requests a UNCCD policy to access data and information provided by Parties and other reporting entities.

FACILITATING BETTER SHARING OF CLIMATE RESEARCH AND DATA

Supporting better data licensing, metadata, and database user-interface practices, so more people everywhere can find solutions to the climate crisis.

تعزيز التواصل بشكل أفضل فيما يتعلق بأبحاث وبيانات المناخ

促进更好地交流气候研究和数据

支持数据许可、元数据和数据库用户界面的最佳实践，以便世界各地更多的人能够找到应对气候危机的解决方案。

Promouvoir une meilleure communication de la recherche et des données climatiques

Soutenez les meilleures pratiques en matière de licences de données, de métadonnées et d'interfaces utilisateur de bases de données afin qu'un plus grand nombre de personnes dans le monde puissent trouver des solutions à la crise climatique.

FACILITAR UN MEJOR INTERCAMBIO DE INVESTIGACIONES Y DATOS SOBRE EL CLIMA

Apoyar mejores prácticas de licencias de datos, metadatos e interfaz de usuario de bases de datos, para que más personas en todas partes puedan encontrar soluciones a la crisis climática.
